Firewall policy review

External-FW · 15 Oct 2026, 15:45 UTC

99/100	20	not run	—
OPTIMIZER SCORE	RULES ANALYSED	COMPLIANCE	CHECKS FAILED

20 rules were analysed across 1 inline layer(s). No rule changed since the previous run, though 2 could not be compared and so cannot be reported as unchanged.

What needs a decision

No compliance profile was evaluated in this run.

What changed since the previous review

Compared against the review of 15 Oct 2026, 15:39 UTC.

0	0	0	0	18
ADDED	REMOVED	MODIFIED	MOVED	UNCHANGED

2 rule(s) could not be compared. Their reach could not be resolved in one of the two reviews, so this comparison cannot state that they are unchanged. That is not the same as a change, and it is not the same as no change.

Gateway state

1 gateway(s) read at one instant. 2 finding(s). This is a reading, not monitoring.

Severity	Host	Finding
medium	10.40.31.178	**Mgmt** — Mgmt has address 192.168.99.2/24 but is administratively disabled. The Management API shows the address and not the state, so this is invisible there.
high	10.40.31.176, 10.40.31.177	**reachability** — These gateways did not answer, so nothing below says anything about their state. Absence of a finding is not health.

What this review does not cover

This tool reads configuration. The list below is not a caveat added for safety — it is the set of questions a configuration reader cannot answer, and a decision taken from the pages above should be taken knowing they are open.

Also true of every review this tool produces:

- Traffic paths are simulated from configuration. No packet is sent, and a live gateway log can still differ.
- A rule this tool cannot model statically is reported as unknown, never as safe and never as a violation.
- There is no compliance percentage. A single number would have to price an unverifiable check, and every available price misleads.
- Hit counts come from the Management API as running totals; this tool does not interpolate between readings.

Generated by Firewall Insight 4.43.1 from review External-FW-20261015T154508, which took 29.85s. The evidence behind every figure is stored locally and can be re-read.
